$$w = abba$$

LMD

RMD

sentential forms  $\in (V \cup T)^*$

non-terminals  $\leftarrow$  terminals

# parsing & ambiguity

## Ambiguous Grammar

- A grammar is said to be ambiguous iff there exists a string  $w$  that belongs to the grammar and there exist 2 diff. LMDs or 2 diff RMDs for the string (or parse trees)

## Question 26

Is the grammar ambiguous?

$\Sigma = \{+, *, /, -, (, ), \text{var}, \%, \text{constant}, ^\}$

variable    literal

$E \rightarrow E + E \mid E - E \mid E * E \mid E / E \mid E \% E \mid (E) \mid E^E \mid \text{var} \mid \text{constant}$

$w = a + b * c$

## Derivation #1

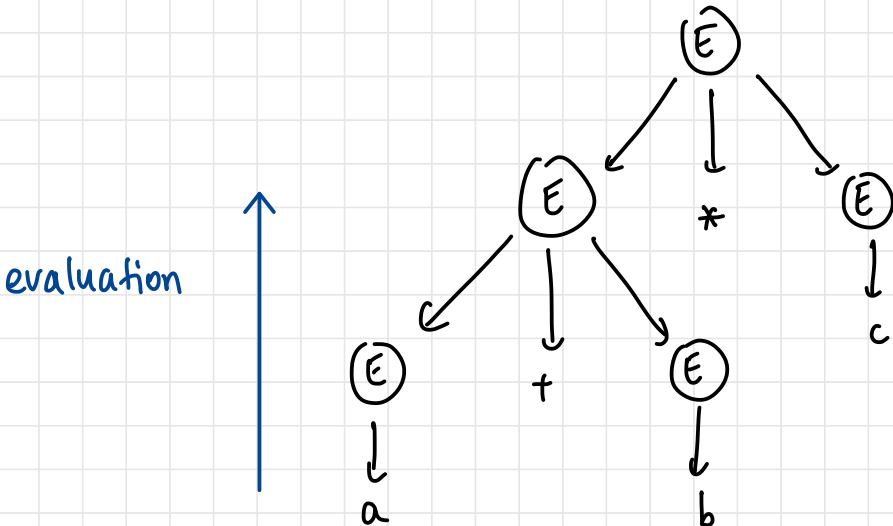

$E$	$\xrightarrow{E^m}$	$E + E$	—	Using	$E \rightarrow E + E$
	$\xrightarrow{a}$	$a + E$	—		$E \rightarrow a$
	$\xrightarrow{b}$	$a + E * E$	—		$E \rightarrow E * E$
	$\xrightarrow{c}$	$a + b * E$	—		$E \rightarrow b$
	$\xrightarrow{c}$	$a + b * c$	—		$E \rightarrow c$

Derivation #2

$E$	$\xrightarrow{lm}$	$E * E$	$E \rightarrow E * E$
	$\xrightarrow{lm}$	$E + E * E$	$E \rightarrow E + E$
	$\xrightarrow{lm}$	$a + E * E$	$E \rightarrow a$
	$\xrightarrow{lm}$	$a + b * E$	$E \rightarrow b$
	$\xrightarrow{lm}$	$a + b * c$	$E \rightarrow c$

- This is not desirable (giving compiler a choice)
- Order of operations
- Should not retain such grammars

Note:

- There is no algorithm to prove that a grammar is ambiguous.
- Must take an example and derive (start from minimal length)

Question 27

Find if the grammar is ambiguous or not.

$$S \rightarrow aS \mid Sa \mid \lambda$$

1) length = 0

$w = \lambda$ ; cannot derive further

2) length is 1

$w = 1$

$$S \stackrel{LM}{\Rightarrow} aS \\ \Rightarrow a\lambda$$

$$S \rightarrow aS \\ S \rightarrow \lambda$$

$$S \stackrel{LM}{\Rightarrow} Sa \\ \Rightarrow \lambda a$$

$$S \rightarrow Sa \\ S \rightarrow \lambda$$

$\therefore$  the grammar is ambiguous

# Question 28

$$s \rightarrow aSbS \mid bSaS \mid \lambda$$

1) length = 0

$w = \lambda$  ; unambiguous

2) length = 2

$w = ab$  or  $w = ba$  ; unambiguous

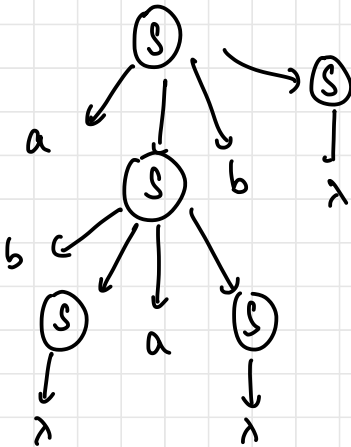

4) length = 4

$w = abab$

$s \stackrel{lm}{\Rightarrow} aSbS$   
 $\Rightarrow abS$   
 $\Rightarrow abasbS$   
 $\Rightarrow ababS$   
 $\Rightarrow abab$

$s \rightarrow aSbS$   
 $s \rightarrow \lambda$   
 $s \rightarrow aSbS$   
 $s \rightarrow \lambda$   
 $s \rightarrow \lambda$

$s \stackrel{lm}{\Rightarrow} aSbS$   
 $\Rightarrow abSaSbS$   
 $\Rightarrow abasbS$   
 $\Rightarrow ababS$   
 $\Rightarrow abab$

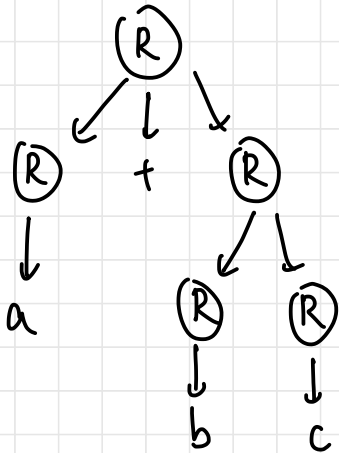

$s \rightarrow aSbS$   
 $s \rightarrow bSaS$   
 $s \rightarrow \lambda$   
 $s \rightarrow \lambda$   
 $s \rightarrow \lambda$

The grammar is ambiguous

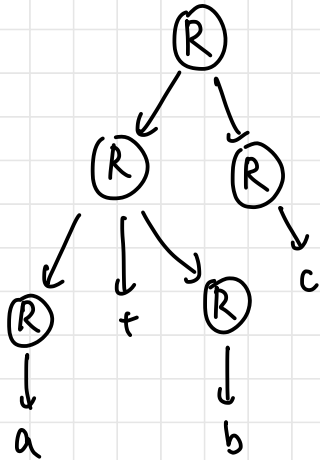

# Question 29

$S \xRightarrow{\text{EM}} aab$	$S \rightarrow aab$
$\Rightarrow aab$	$B \rightarrow b$

Grammar is ambiguous

# Question 31

$$s \rightarrow |s| | |s| \lambda$$

1) length = 0  
unambiguous

2) length = 1  
unambiguous

3) length = 2

- Normalised form
- RHS of productions should become useful

- CNF is used by efficient parsing algorithm (CYK algorithm)
- GNF rules state that string of length  $n$  requires only  $n$  steps

## CHOMSKY NORMAL FORM

- Restricts no. of symbols on the right side of a production to be two
- Parse tree for derivation is a binary tree
- Every derivation of a string of  $n$  letters has exactly  $2n-1$  steps
- There can be more than one CNF for a CFG
- All CFGs can be converted to CNF

## Rules

1) A non-terminal generating terminal

$$X \rightarrow x$$

2) A non-terminal generating two non-terminals

$$X \rightarrow XY$$

3) Only start symbol can generate  $\lambda$ , only if  $\lambda$  is a part of the language

$$S \rightarrow \lambda$$

## Cleaned Grammar

- Before converting to CNF, the grammar must be cleaned (should not have a  $\lambda$  production except for the start symbol)
- If any variable produces  $\lambda$ , it is called a nullable variable
- Should not have unit productions (no useful operation)
- No useless productions (must remove)
  - 1) Non-generating variables  $S \rightarrow aSb | S \leftarrow$  never terminates
  - 2) Unreachable variables  $S \rightarrow aSb | a ; A \rightarrow a | b \leftarrow$  unreachable
- The steps must be followed in order
  - 1) Eliminate  $\lambda$  productions
  - 2) Eliminate unit productions  $\rightarrow$  each step must increase length of sentential form or no. of terminals
  - 3) Eliminate useless productions

## Question 53

Clean up nullable variables (NOT CNF)

$$S \rightarrow ASA | aB$$

$$A \rightarrow B | S$$

$$B \rightarrow b | \lambda$$
